

## **Rye Water Aqueduct, Leixlip, Dublin**

March 2001

Main Contractor: Liffey Developments Ltd.

As part of a programme of emergency remedial works, a minipile retaining wall was constructed adjacent to the live railway which runs upon the Rye Water Aqueduct structure at the location of this project. 130No., 10 metre long, 200mm diameter augered piles with API tube and central bar reinforcement were constructed from a temporary work platform using our Klemm KR701 mini rig. As with all railway works, the crew was part of our PTS trained team of operatives.
